

Handicapped Accessibility

A playground or any surfacing and flooring area that has uncontrolled access may require a unitary surface (i.e. rubber tiles/mats/blocks and/or pavers) to ensure the highest standard of safety. It also reduces high maintenance costs commonly associated with loose filled products and/or turf materials.

More and more agencies are becoming aware of the fact that all public facilities must be handicapped accessible. With the 1991 passage of the “Americans with Disabilities Act” (ADA), many areas are being planned or modified to give people with disabilities an opportunity to participate in more everyday activities. Regardless of your needs, it is not easy to have the mobility to maneuver strollers, crutches, wheel chairs, canes, walkers, etc., through loose filled materials and/or turf products. All of Unity’s products are designed to give children and adults with or without disabilities and varying mobility’s access to freely navigate as per ASTM’s *Accessibility-Rotational Penetrometer* test.
