

Installation

Our products place in the intermediate category regarding installation difficulty. Contractors carry out most of the installations. An installation manual/guide is available upon request. Adhesive must be applied to a solid base and/or interlocks of our products. Tools that are common for typical installations include: a utility knife or jig saw for cutting, a straight edge to make your cuts accurately, a string line and tape measure. A trowel or caulking gun may be needed for gluing purposes and a drill may be needed for bolt-down applications.
