

What sets our products at a level that others can only marvel at is our authentic, quadruple, interlocking design that is 40% larger in size. This system is built directly into our products, thus eliminating the need for fasteners, pins, clips, etc. Our tongue and groove system, along with our newly *patented* “Button-Lock™” technology, is designed to “*snap and hook*” into place, providing 60% more protection and area to glue than the competition. This new technological advancement further provides the strongest locking mechanism along various parts of the product, preventing our products from separating, curling or peeling, which is characteristic of a standard tile/mat/block/paver.
