

A product of: Unity Creations, LTD.

# "Unity" Surfacing Systems™

Interlocking, Unitary, Rubberized Safety Surfacing, Flooring and Pavers.

Standard tiles are a thing of the past.

Release Date = Spring 2014.

Eco-safe Rubber Co's. products come in a wide variety of colors and thickness to fit your indoor and outdoor needs. Add EPDM top tiles to the mix, and you have not only enhanced the atmosphere of the area.....but also the people who are enjoying the safety surfacing, flooring and paver products that we provide.

During this time, we have been seeking changes to the product line that would revolutionize the industry. First it was the introduction of the interlocking tile; Then it was the introduction of the "bolt-down system"; Then it was the "running bond" method of installation. And recently, it was the "glue drainage port".

Over the years, we have identified the challenges faced by many architects, engineers, consultants, end users, etc.....and we have ALWAYS responded. In the Spring of 2014, we will be able to offer you customization of letters and numbers that are produced as a part of the manufacturing process, which won't fade, chip, peel or crack.

This exciting new way to dress up a safety surfacing, flooring and/or paver area with Eco-safe Rubber Co. gives you endless possibilities that are truly priceless. Our internal design team can create playful patterns using numbers and letters that would compliment any project's theme. These are attributes that are important to every architect, engineer, designer, consultant and/or end-user.

Contact us today so we can help you create a personalized environment to match your theme.
