Re: Rubber tiles mats-blocks for our basement

Dear Erick B. Pinz

I would like to take this opportunity to graciously thank you and your company for installing your 1 1/2" (inch) "Pave-Land" series: safety surfacing and flooring in the mat-block form in the basement of our home in Northport, Long Island, New York using the "splash design". Your recommendation to go with the 1 1/2" over the 1" seems better than expected. I would also like to thank your installation crew for having to carry the materials from the road, down the driveway, around the back of the house and to the basement for installation. I don't know how they did it but we are quite pleased with them especially since it only took them one day instead of two.

This product is much better than the mildew riddled carpet that was there. It really stuck up the basement. Now it is much dryer down there, especially since we still have that water leak. Over the winter when the kids would go down they're to play, and for me to watch, the floor did not retain the cold temperatures that I thought it would. In fact it was quite pleasant to walk on especially after being out your feet all day long. The kids now call the basement: "the midnight room" because the flooring looks like the sky at night with the stars as those white chips in it.

After learning that your material is made from clean 100% recycled tires and rubber. I have taken the liberty of sending you this letter because we feel that everyone should be encouraged to use recycled products, especially yours. Have a great summer and keep up the good work.

Sincerely,

Ella Bell & family
